Microsoft Windows 8 lite iso 700mb There are many people out there who need a brand new Computer, but Windows 8 comes not as cheap as you might feel like it should be. Microsoft is becoming more and more expensive every day! If you're stuck with finding something that fits your budget, then look no further than downloading a free ISO file for your PC. It doesn't matter what OS (operating systems) your device is running on (Windows 7,8,8. 1 or 10), as long as it has a valid product key, you'll be able to install and use Windows 8.1 lite iso on it. How to Download Windows 8 lite iso 700mb First of all, hit the download button above. Let the file download completely. You will then need a tool to open a .iso image file. Apps such as 7zip can do this for you instantly free of charge, so go ahead and install it on your device. Some virus protection programs might warn you about files downloaded from the internet – so if you have one – just add an exception to the application or turn off your anti-virus until after the file is done downloading and installed onto your computer. Once the download is complete, open the ISO image using 7zip or a different tool. Burn the image to a DVD from your computer. If you do not have a DVD drive, you can use a USB flash drive instead – just make sure to create a bootable USB and extract all files from the ISO. On your device: Make sure you know what your current version of Windows is and what version of Windows 8 will be compatible with your device Before you start, make sure that you have administrative rights and that you've turned off all security options (anti theft features) on your PC. Your anti virus must also be disabled during this process as well as any other security programs such as Internet Security. Plug in your device to a USB/FireWire/CD-Rom or other device capable of burning a DVD. While the device is being recognised, go ahead and pop in the DVD. This will take a while... Once the screen has booted up, click on 'install to hard drive' from the menu and let it do its thing. Now you will be able to choose the language of your choice from Windows 8 lite iso 700mb. You can also change some settings from here too! When done, click on 'next'. Choose which version of Windows you want to install. There are 3 versions to choose from. Go with the default one unless you know for sure that it will not work with your computer. Windows 8 lite iso or Windows 8 Home premium will work on any PC, even if your original OS is XP or Vista! Follow the on-screen process until you're asked to enter in a product key. Don't worry about this step yet... Now, click change product key and enter in any key you want (make sure to copy it down somewhere so that you don't forget later). There's only one catch... They have got to be for an existing copy of windows 8.1 lite iso .
